1. Applicant's election of the Invention Group I in the reply filed on 8/31/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. Claims 1-23 are still pending for examination and claims 16-23 are withdrawn from consideration.

3. The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-15 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Wilkins et al. [U.S. Publication No. 2004/0133924].

5. Wilkins et al. disclosed (e.g., see Figs. 1-8) the invention substantially as claimed. Taking claims 1, 4-5 and 8 as exemplary claims, the reference disclosed a system for synchronizing (e.g., see the abstract, item 450 of Fig. 4) a multiplicity of devices in multimedia (450 of Fig. 4) environment, comprising:

a) at least one central storage (e.g., on-line photo sharing sites, see § 11) and an interface device, wherein audio, video and photographic information (e.g., multimedia of Fig. 4) are stored in digital form. And this multimedia is updated (e.g., modified) in relation with other specific storage, whereby the at least a user or multiple users can

access substantially identical multimedia related to the at least one user (e.g., see § 14 and last 3 lines of § 17).

While Wilkins et al. disclosed a plurality of host computers, a server computer and other devices connected to each other by a network 406, Wilkins et al. did not explicitly mention the term “zone” or “zone specific storage”. It would have been obvious to one of ordinary skill in the art to recognize that such “zone specific storage” would have been a storage of the server 404).

6. As to claims 2, 3, 6, 7 and 13-15, such feature of either hardwired or wireless LAN or WAN, a network connection, and wireless mobile device are the well known feature and well within one of ordinary skill in the art at the time the invention was made.

7. As to claims 11 and 12, Wilkins et al. taught also the feature of A/D conversion (e.g., see A/D converter 208 and the processor system 200 of Fig. 2).

8. A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) days from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C 133, M.P.E.P 710.02, 710.02(b)).
